

# The Radiology Lab Management System Integrates with Dolphin Imaging

To Create a Single, Seamless Work Flow Solution for Labs

The Radiology Lab Management System is now seamlessly integrated with Dolphin Imaging. You can capture patient and procedure information just once at check in and never worry about it again. Maintain the integrity of all your information and streamline the workflow for maximum efficiency.

The RLMS/Dolphin Integration is designed for use with Dolphin version 8.0 or higher. With this new product labs can send data to and retrieve data from Dolphin including ...

Standard Dolphin	Premium: All the fields of Standard, plus	
Patient ID	Title	Email
Name	Phone 1	Notes
Birth Date	Phone 2	Insurance Company Name
Gender	Address	Doctor Name
Race		

Using the familiar Patient Information Screen within RLMS, labs can now automatically detect the presence of Dolphin, or start it if it is not yet running.
