

The Radiology Lab Management System

Signature Capture for HIPAA Compliance

Including ePad-ink hardware and all connections necessary to plug and play

The Radiology Lab Management System now includes the option for electronic signature capture. This feature eliminates the need for paper documentation from every patient for HIPAA compliance and other required acknowledgements.

RLMS has partnered with Interlink Electronics to provide state of the art ease of use. Simply update the RLMS software from the web so you have the current version. Connect the ePad to the PC running RLMS, specify signature capture and then throw your paper away!

■ Customized for Your Lab

Specify the exact agreement or authorization language you want displayed under the signature line – we include it as part of your standard product configuration.

■ Reference the Signature from the Patient Information Screen

Easily view the “signature on file” field on the Patient Information screen. Display the signature and reference the time and date it was created.

■ Easier for Patients, Easier for You

Display HIPAA documents on a screen for patients to review or hand them a hard copy if they want one. Either way, you are finished and the file is complete as soon as they sign the pad.

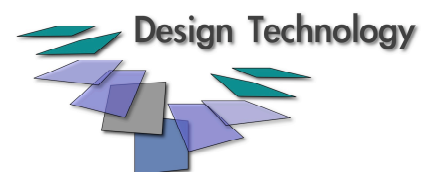

INTERLINK
ELECTRONICS

From order to implementation, you can have the new ePad-ink Pro up and running in a matter of days. Total cost, including hardware and software upgrade, is included.
